

# Komatsu SmartCare

*Remote equipment monitoring for  
your mobile mining fleet*

**Is machine health and improving fleet performance important to you? If you could achieve improved equipment availability at the same time as decreasing maintenance costs, would you?**

**The answer is SmartCare, Komatsu's remote equipment monitoring suite of products.**

Komatsu have an experienced team of machine **Subject Matter Experts (SME)** and **Product Performance Managers** that can focus on the health, productivity, and overall performance of your mobile fleet.

Our mining equipment SME's can be fully integrated into your teams on site to ensure you achieve best in class machine performance. We support the site-based maintenance and reliability teams, providing a detailed summary of your machine or fleets health, using machine generated data to gain a deeper understanding into performance.

A Komatsu analyst has access to a global database of custom diagnostic and predictive software tools, that when combined with a variety of advanced data driven methodologies, can assist in the remote prediction and diagnosis of potential machine downtime events.

Komatsu's reliability solutions will deliver value by improving machine reliability, increasing machine availability and decreasing operational costs.

Contact your local Komatsu representative to find out how we can help **support you**.
